

## How do I dispose of mural paste?

### Instructions on how to dispose of mural paste

It is wonderful when the work is done, your chosen motif adorns your walls and you can put everything away. But what about the leftover mural paste? Do you need to store it? Or can it be disposed of as household waste? These questions, along with some valuable tips on using Komar's mural paste, are available here.

### Is Komar's mural paste toxic?

Komar's paste is neither toxic nor dangerous. Thanks to its organic components, any contact with the skin, for example, is absolutely harmless.

### Can mural paste be disposed of as household waste?

You may dispose of mural paste in your domestic bin for residual waste (EWC code 08 04 14). To

prevent the adhesive residue from sticking to your waste bin and drying out, it should be disposed of in a bag or sealable container.

### Can mural paste be flushed down a toilet?

Generally, mural paste should be disposed of as household residual waste or at a recycling centre because it may block the drainpipes. Even small amounts may thicken at narrow points in the pipes and block the drain.

### Should I remove the brushes and stirrer from the mural paste?

You should quickly remove any paste residue from the mural before it is completely dry. This can be done using a damp cloth. You can easily clean the brushes and stirrer under running water. Afterwards, you should run the tap for a while longer so that no residue settles in the wastewater pipe.

### Can I store the mixed mural paste?

Due to its natural ingredients, Komar's mural paste has a limited shelf life. It can be stored in a sealable container for several days. However, its consistency and odour will change over time. Since its adhesive strength will also decrease each day, it is advisable to test the adhesive on a single panel of the next mural you wish to hang.

And if you no longer have any use for the leftover paste, you can always use it for handicrafts. Young and old alike enjoy cardboard box crafts – so much so that you may not have to worry about disposing of it properly at all!
